Head Up to 40 % reduction of hotfoil costs with the new hot stamping module with foil saving function

Subhead Recently KÖRA-PACKMAT launched the world's first hot stamping module with foil saving function

VILLINGENDORF, Germany, January 2007 – KÖRA-PACKMAT, a German manufacturer of packaging and personalization systems, recently launched its newly developed high-speed hot stamping module. The module needs no preheating time and runs at speeds of up to 30,000 products/hour.

By using KÖRA-PACKMAT's new module several hotfoil panels can be applied simultaneously.

Due to a revolutionary process this module needs up to 40 % less hotfoil compared to commonly used hot stamping devices.

Hot Stamping Module

Notes to the editor (Please send a voucher copy)

KÖRA-PACKMAT is a privately owned company, created in 1997 through the merger of PACKMAT, a special-machine building company founded in 1966, and KÖRA, a packaging machine manufacturer founded in 1980. The merged company built on its combined expertise and focussed on machines for feeding, collating and film wrapping of flat paper and plastic products.

Today, more than 100 highly qualified employees develop and produce film wrapping machines and feeding systems. KÖRA-PACKMAT's machines produce packs of high quality and integrity, the machines are renowned for their durability and reliability. A large proportion of the company's production is exported worldwide.

KÖRA-PACKMAT founded subsidiaries in Singapore and China to support its strong customer base in Asia. KÖRA-PACKMAT is represented on all continents by sales partners in 48 countries.
