The PINSecure Label™ New Destructible film and adhesive developed for scratch off labels improves PIN Number security.

Pompano Beach, FL, March 2007 –

Web Technology recently launched its new line of high security scratch off labels for the phone card and gift card industry.

With the PINSecure Label™, card manufacturers can now provide their customers with an economical PIN security system that prevents theft from razor lifting of the label, tape removal and light penetration of the ink.

The new destructible film and adhesive is combined with Web Technology's custom security pattern and ink technology.

The result is a tamper evident label that tears easily on paper or plastic cards, providing unparalleled security in a cost effective format.
